POWER SHOT NANO HEXAGON 2900 II

NEW

Stiff ○ — ○ Flexible

Material: Super high modulus carbon graphite
+ NANO

Weight (g): 88 ± 1 Balance (mm): 290 ± 3
Length (mm): 675 Tension (lbs): 28-35

Functions:

Bag:

日本バドミントン協会審査合格品

製品安全協会検査合格品

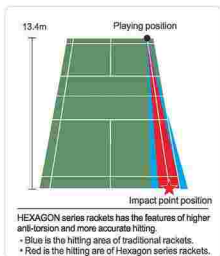

★By applying trapezoid cross-section frame, POWER SHOT NANO HEXAGON 2900 II has better performance in offense.

★POWER SHOT NANO 2900 II looks quite light by applying electro gilding coating.

★By narrowing the cannellure of frame to 3mm, it can increase the strength of the frame over 30%. The tension of carbon rackets will increase greatly based upon mechanical analysis (up to 40bs).

KUMPOO HEXAGON SERIES

The shaft torsion increases by 70%

Patent Hexagon shaft design can enhance the shaft strength and bending point of hitting as well as reduce the twist angle of the racket.

The 2nd generation of patent Hexagon front cap

The 2nd generation of patent Hexagon front cap can provide larger thumb touch area. It is easy to control hitting angle for doubles players. Hexagon front cap and Hexagon shaft can increase the anti-torsion greatly.

★ Patent Hexagon shaft design can enhance the shaft strength and bending point of hitting as well as reduce the twist angle of the racket.

★ By applying woven material in the top frame, it can increase the hitting inertia and offensive force.

★ Adopting HEXAGON patent design in the front 40mm of shaft.

★ By narrowing the cannellure of frame to 3mm, it can increase the strength of the frame over 30%. The tension of carbon rackets will increase greatly based upon mechanical analysis (up to 40bs).

★ Patent Hexagon shaft design can enhance the shaft strength and bending point of hitting as well as reduce the twist angle of the racket. Kumpoo SPECIAL 1 shaft has adopted Hexagon design.

★ Specific hexagon front cap can provide larger thumb touch area.

★ By applying color change technology, the racket will present varies colors from different angles or in different light.

★ Front cap: Specific hexagon front cap can provide larger thumb touch area.

★ Shaft: The 2nd generation of Hexagon shaft has adopted hexagon structure in the joint area of shaft and frame. It can enhance the high anti-torsion as well as increase the stability and beauty.

★ Cannellure: By changing the previous 4-hole narrow cannellure to 6-hole, the largest impact resistance area is enlarged to 12 lines. The frame strength has been increased greatly.

POWER CONTROL P888

Stiff ○ — — — ○ Flexible
Material: Super high modulus carbon graphite
Weight (g): 87 ± 1 Balance (mm): 290 ± 3
Length (mm): 675 Tension (lbs): 30-40
Functions:

POWER CONTROL P889

Stiff ○ — — — ○ Flexible
Material: Super high modulus carbon graphite
Weight (g): 87 ± 1 Balance (mm): 290 ± 3
Length (mm): 675 Tension (lbs): 30-40
Functions:

The groove of Kumpoo high tension rackets is 3.0mm.
The groove of normal rackets is 5.5mm.

Kumpoo high tension series Tension:40LBS

The side tension is increased up to 18.18KG Remark:1KG=2.2LBS

★By narrowing the groove from normal 5.5mm into 3.0mm, Kumpoo high tension series rackets can disperse the side force of a racket more balanced. Under the same side force, they will reduce the stress of dangerous points and upgrade compressive resistance effectively by dissipating the stress scientifically.

★The appearance design of POWER CONTROL P888 is novel and colorful. By applying 2300 frame and 7.0 shaft, the tension of the racket can up to 40lbs.

POWER CONTROL WOVEN A560

Stiff ——— Flexible

Material: Super high modulus carbon graphite
+WOVEN

Weight (g): 87 ± 1 Balance (mm): 288 ± 3
Length (mm): 675 Tension (lbs): 24-30

Functions:

Bag:

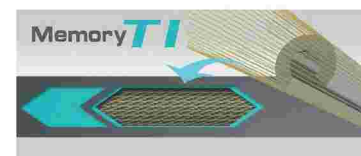

★ By using of concave string holes at the position of 2 O'clock and 10 O'clock of the frame, it enhances the strength of the frame effectively.

★ The gradient design on the sides of the shaft can move up the kick point, reduce the deformation as well as increase the speed.

★ The frame is designed for increasing torsion resistance (fusiform cross section). This will reduce the air resistance effectively and increase the elasticity of the frame.

Special material series: Memory TI Craft features

★ High modulus carbon graphite and high technology memory TI have the features of high restorability and high anti torsion.

★ Kumpoo uses woven material which is imported from Japan at 3 O'clock and 9 O'clock of woven series rackets. Because of its super light and high-strength, Kumpoo woven series rackets can increase the strength of 3 O'clock and 9 O'clock effectively and bear high impact force in the moment.

Stiff — Flexible

Material: Super high modulus carbon graphite
+NANO

Weight (g): 84 ± 1 Balance (mm): 290 ± 3
Length (mm): 675 Tension (lbs): 30

Functions:

Bag:

NEW

★ By applying super slim cross-section and plane wing cross-section at 3 O'clock and 9 O'clock, it can reduce wind resistance and increase flexibility and swing speed.

★ By widening the racket in 5 O'clock and 7 O'clock, the balance effect and stability have been enhanced greatly.

★ By narrowing the width at 2 O'clock and 10 O'clock, it can increase flexibility and ball control function.

★ Great cross-section: The cross-section is made up of two sharp parts. The outer cross-section is symmetric with two cambered surface; The inner cross-section looks like a raised cambered surface.

★ Quicker rebound effect: Compared with traditional ones, this kind of cross-section has quicker rebound ability, clearer ball sense.

★ Quicker swing speed: As the wind resistance will be less, the swing speed will be quicker.

★ Larger sweet area: The inner cross-section looks like a raised cambered surface. It can increase the sweet area.

Stiff ——— Flexible
Material: High modulus carbon graphite
Weight (g): 88 ± 1 Balance (mm): 285 ± 5
Length (mm): 675 Tension (lbs): 24-28

Functions:

Athena Female rackets series

Elastic, light, easy to use

★ Larger sweet area and lower anti torsion has enlarged the effective area greatly. It is suitable for female. It can reach the best buffering effect after hitting.

★ Reduce the antitorque point effectively, dissipate the impact force at the moment of batting and enhance comfort of swing.

★ Water transfer printing craft(metal wire),incisive design, strong hitting resilience.

★ By applying bright paint on the surface, the racket is brilliant.

★ Water transfer printing craft(like drops),incisive design, strong hitting resilience.

★ By applying water transfer printing craft (like drops) in the front cap, the design is quite novel.

★ Water transfer printing craft(woven pattern),incisive design, strong hitting resilience.

★ By applying water transfer printing craft (woven pattern) in the front cap, the design is quite novel.

TRERAKE 130

NEW

Stiff Flexible

Material: Carbon graphite

Weight (g): 130 ± 5 Balance (mm): 285 ± 5
Length (mm): 675

Functions:

Remark: No string

TRERAKE 150

NEW

Stiff Flexible

Material: Carbon graphite

Weight (g): 150 ± 5 Balance (mm): 285 ± 5

Stiff ———— Flexible

Material: Carbon Aluminium

Weight (g): 86 ± 1 Balance (mm): 285 ± 5

Length (mm): 675 Tension (lbs): 18-24

Functions:

Remark: 1 pair/set with 22lbs

Bag

With a fashionable black-white lovers' bag.

★ The aluminum frame is imported from Taiwan and the shaft is carbon graphite.

FUNCTIONS

RACKETS

HEXAGON Shaft
By changing the traditional round shape into hexagonal shape of a shaft (3cm above the front cap), it changes the using functions of a racket.

EXPERT TITAN
There is hexagon from handle to frame which can decrease torsion greatly (patent).

PLATING
By applying plating, the design of racket surface can be brighter.

TAPER
As TAPER shaft is the same as golf handle, they apply hexagon from handle to frame. It can decrease torsion greatly (patent).

SUPRE LIGHT WEIGHT STRUCTURE
The employment of NANO technology makes it possible to make the frame supper light weight without sacrificing durability and create rackets with excellent power and high maneuverability.

NARROW SQUARE
Designing the upper part of the frame as oval makes a racket with all the qualities of the NANO 700 and NANO 900.

CARBON NANO
By adding nano silicon dioxide into the resin system of racket model, it can fill the gap of carbon effectively and increase antifatigue greatly. It can also lighten 10% weight without sacrificing strength.

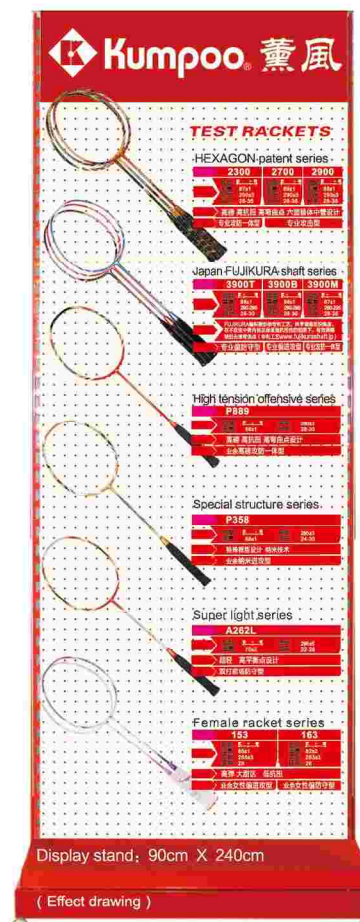

NARROW STRING CANNELURE
Narrow string cannellure design can increase the effective area of racket and compressive resistance.

BADMINTON STRING

Elasticity

There is grain in the surface.
High elasticity and durability.

KS-69

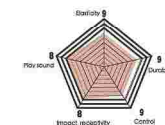

NEW

Core wire: High density fiber
Coating: Special synthetic multifilament
Color: Yellow+green/Yellow+orange
Size: 0.70mm*10m
Functions: High elasticity and durability

Elasticity

Applying high strength yarn knit in the surface.
High durability and excellent control.

KS-67

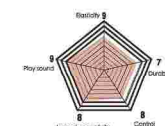

NEW

Core wire: High density fiber
Coating: Special synthetic multifilament
Color: Blue/Yellow/White/Black
Size: 0.68mm*10m
Functions: High durability and excellent control

Elasticity

Applying special Nano nylon material in the surface.
High elasticity.

KS-64

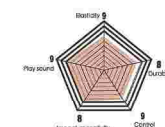

NEW

Core wire: High density fiber
Coating: Special synthetic multifilament
Color: Blue/Yellow/White
Size: 0.64mm*10m
Functions: High elasticity and excellent control

Elasticity

By using of NANO technology and coating the
outer strings with NANO material, it has high
durability and elasticity.

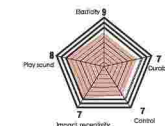

KS-66TI

Core wire: High density fiber+Ti
Coating: Special synthetic multifilament
Color: Blue/Black/Purple/Yellow
Size: 0.66mm*10.5m
Functions: High durability, elasticity and cold-resistant

Elasticity

Super elasticity and great hitting sense, superfine
string for easier threading, great comprehensive
performance.

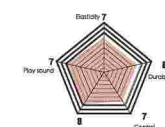

KS-60

Core wire: High density fiber
Coating: Special synthetic multifilament
Color: Blue/Black/White/Yellow
Size: 0.7mm*10.5m
Functions: High durability, elasticity and cold-resistant

Elasticity

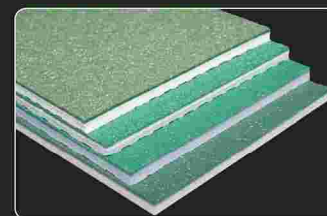

Super elasticity and great hitting sense, superfine
string for easier threading, great comprehensive
performance.

KS-5.0Nano

Core wire: High density fiber
Coating: Special synthetic multifilament
Color: Black/Yellow
Size: 0.7mm*10.5m
Functions: High durability and anti-skidding

Floor Glue

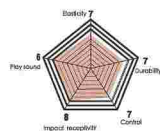

KBS-66 4.5mm	4 PCS Crystal sand grain	Dark green	International professional match
KBS-62 4.5mm	4 PCS Crystal sand grain	Dark green	International match
KBS-60 4.5mm	4 PCS Crystal sand grain	Green	International match
KBS-30 4.5mm	5 PCS Lichee Pattern	Green	Match

Elasticity

Supper elasticity and great hitting sense, superfine string for easier threading, great comprehensive performance.

KS-2.0Nano

Core wire: High density fiber
Coating: Special synthetic multifilament
Color: Blue/Black
Size: 0.7mm*10.5m
Functions: High durability and anti-skidding

String machine

(Upgraded—the 3rd generation)

KSM-300

Description: LCD face-plate,
Independent switch,
Auto-stop system,
Fastening rackets synchronously.

Color: White/red

Origin: Taiwan

Fastening racket system:

*Synchronous fastening racket system can fasten the racket quickly.
*360 degrees rotation and auto-stop system.
*Anti oxidation and anti-friction.

Racket clamp system:

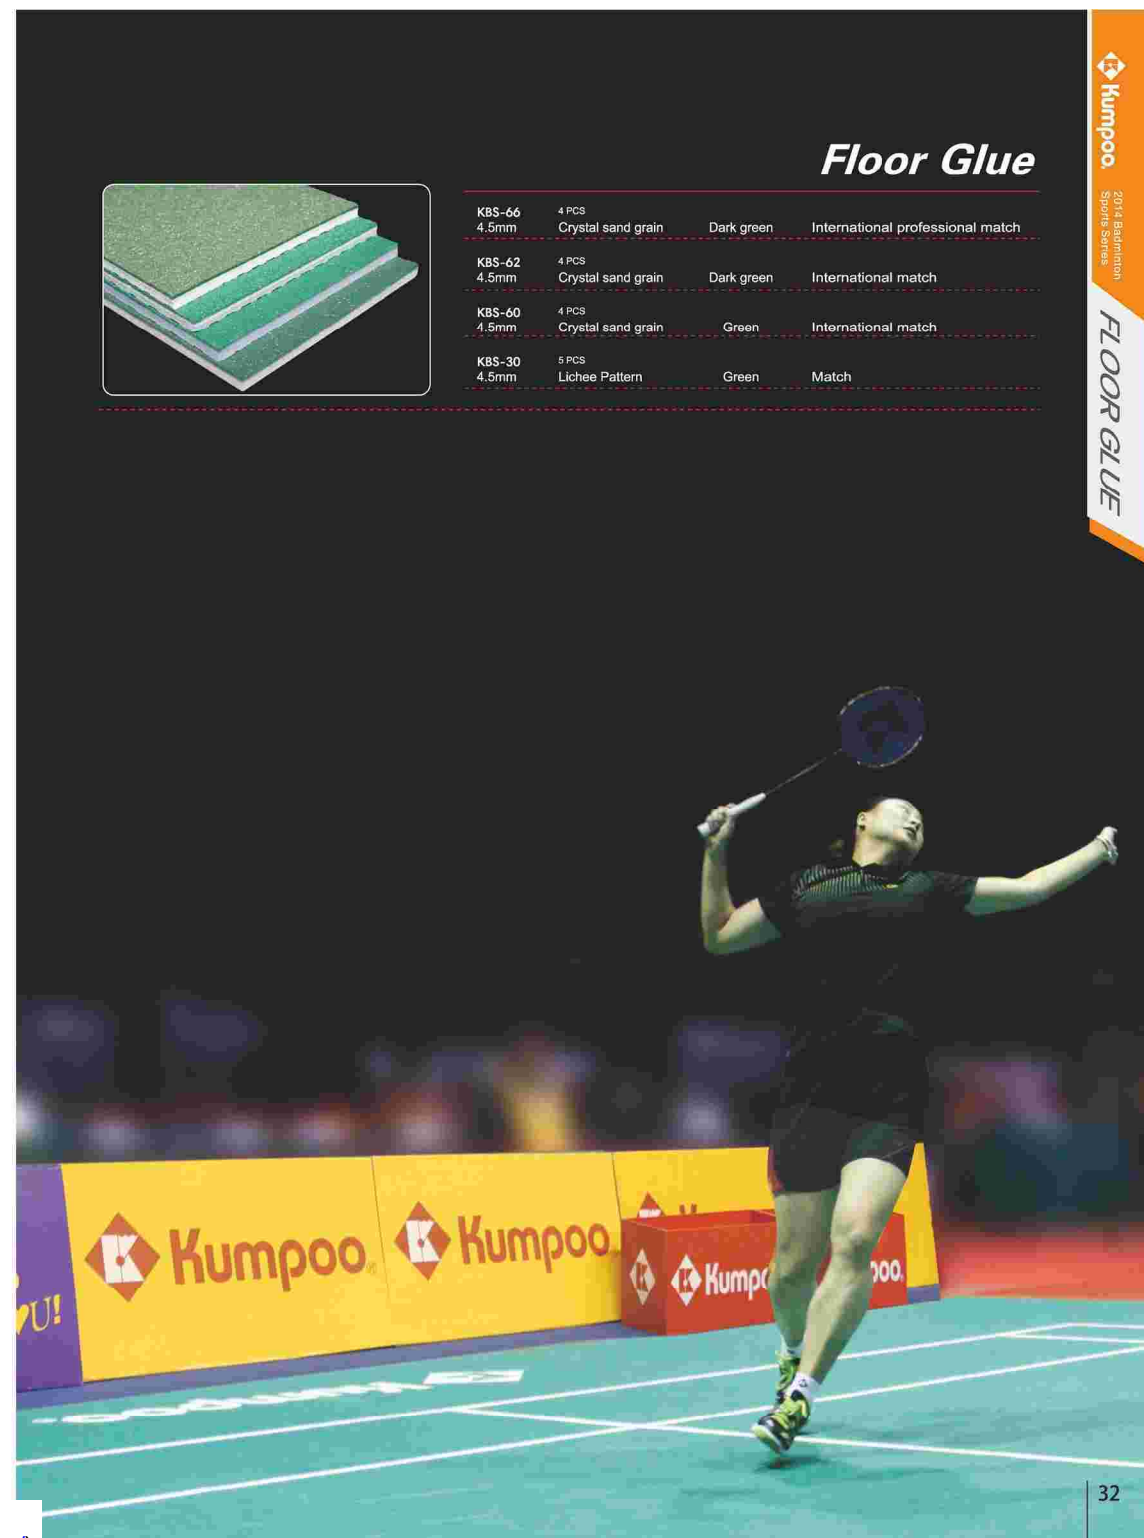

*2 sections stainless steel racket clamp system is light and durable. It won't cause any damage to string and can adjust easily.
*Patent automatic pedestal. Aluminum alloy material is stable and durable. By applying gravity principle, the handle can cut off the link automatically and the string speed has been increased 5%.

Functions description:

*Linear clamp is very quick and accurate.
*LCD faceplate and key-press keyboard.
*Independent switch. The handle can cut off the link automatically.
*Wide voltage: It can work with 110V-220V.

String protection system:

*Self-checking function. It can check the tension, switch, motor and figure automatically.
*The screen will conserve the string information of last time.
*Speed buttons: Slow, Middle and Quick.
*Expand buttons: 0%, 5% and 10%. It can expand the string and make the tension more accurate.
*Material choose buttons: Nylon string, cotton string and polyester string.
*Knot button: The string will be knotted when you press the button. And the tension can be increased 10%.
*Four-section speed reduction technology: It can reduce the damage to the string internal fiber and protect the internal structure.

Shuttlecocks (Upgraded)

As the material is nature, the good and the bad suppliers are intermingled and the professional talents and device are quite limited, it is quite difficult to control the shuttlecocks quality.

Kumpoo built our shuttlecocks quality control center in October 2013. All the shuttlecocks will be tested in the quality control center, including the appearance, flying, speed, etc. The stability and quality of Kumpoo shuttlecocks have been improved greatly.

CHALLENGE 1

NEW

Material: Nature duck feather /
Soft wooden ball head
For: Professional tournament
Stability: Class A (92%) Class B (8%)
Quantity: 12 pcs/Tube

The price should be subject to the latest quotation.

CHALLENGE 2

NEW

Material: Nature duck feather /
Wooden ball head
For: Professional training
Stability: Class A (85%) Class B (15%)
Quantity: 12 pcs/Tube

The price should be subject to the latest quotation.

CHALLENGE 3

NEW

Material: Nature duck feather /
Wooden ball head
For: Amateur training

Wooden ball head
For: Amateur training
Stability: Class A (70%) Class B (20%)
Class C (10%)
Quantity: 12 pcs/Tube

The price should be subject to the latest quotation.

MATCH POINT® Series

Uses Durable adhesive

Using an adhesive that was developed by Kumpoo, along with the flexibility of the cork, is able to absorb the shock at the base to prevent deformation and make a durable shuttlecock.

All of the badminton balls are tested by playing. There is no difference between different prices and levels. They are used in lots of tournaments in Japan as well as in China and gain positive response.

The first class qualified shuttlecocks

Appointed shuttlecocks which are used in big tournaments or qualifying competition by Japan Badminton Association.

The second class qualified shuttlecocks

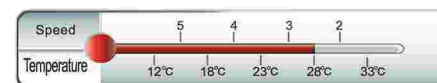

The shuttlecocks are used in the competitions between the members of Japan Badminton Association.

The feathers of shuttlecocks are broken easily in dry season. We can increase the durability by humidifying.

Method: Please open the cover of "push in" and place them on the humidifier for 5 to 10 seconds before you use them.

Speed marks

The flying distance of a shuttlecock will increase 4cm to 5cm if the temperature increases 1 degree. It takes us 1 year to produce and manage the shuttlecocks which has different flying distance and flying functions in different temperature. (The No. is pasted on the cover of tube)

Speed Form

No.	2	3	4	5
Temperature Range	27°C ~ 33°C	22°C ~ 28°C	17°C ~ 23°C	12°C ~ 18°C

* No.1 shuttlecocks should be produced specifically

Material: Nylon / PU ball head
For: Amateur training
Quantity: 6 pcs/Tube

The price should be subject to the latest quotation.

The cushioning effect of high elastic heelpiece is more excellent than the former EVA. It will buffer the instant impact force of heelpiece.

By applying one-piece molding for upper and KPU fusing technology for mesh, it can accelerate air flow, decrease the friction between shoes and feet as well as provide much better comfort sense.

TPU sole can prevent the shoe from deforming and protect the feet better during the movement.

KH-230

★By applying fusing technology for mesh, it can maintain the wear-resistance of shoes, accelerate air flow as well as provide much better comfort sense.

★TPU sole can prevent the shoe from deforming and protect the feet better during the movement.

★The nature rubber and stereo particle design have the features of high wear-resistance and skid resistance.

KH-230

NEW

Upper: KPU+Sandwich mesh

Sole: Raw rubber+MD+TPU

Color: Orange/Black

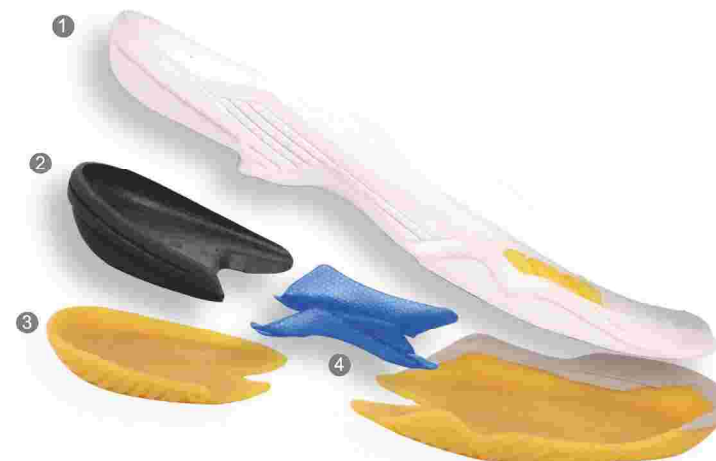

Size: 35-45#

Molding: Narrow molding

Functions:

Microfiber Anti torsion ESS Eva Double air Mesh

Hyper sole TPU Fit

★Name and functions of sole component

- 1.MD and HYPER SOLE high elastic design will provide better stability and rebound.
- 2.The cushioning effect of high elastic heelpiece is more excellent than the former EVA.
- 3.The nature rubber has the features of good wear resistance and anti-skidding.
- 4.TPU will protect feet better in the movement. The metal color makes the shoes lively.

★By applying new TPU sole, this kind of shoes can keep stable and avoid feet spraining in the movement. The upgrade Hyper sole has better performance in wear resistance and anti-skidding. The 5D three-dimensional design can meet the demand of the players.

★The KPU fusing technology for mesh of toe and heel piece and hole design of upper can accelerate air flow greatly and keep your feet dry and comfortable during the movement.

★The TPU piece in the sole can prevent the shoe from deforming and protect the feet better during the movement.

★The nature rubber and stereo particle design have the features of high wear-resistance and skid resistance.

KH-220

NEW

Upper: Super fiber fabrics+High density PU + Sandwich mesh+Fusing craft

Sole: Raw rubber+MD+TPU

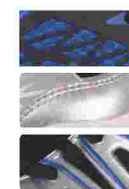

Color: Yellow/Black Size: 35-45#

Molding: Wide molding

Functions:

Microfiber Anti torsion ESS Eva Double air Mesh

Hyper sole 3E wide last TPU Fit

★By applying of PU seamless stitching technology, the shoes will be more comfortable.

★The high-end leather of the toe has good performance of wear-resistance, comfort sense and ventilation.

★The high strength electroplating pieces can fix the shoes shape and protect the feet.

★By applying TPU material in the heel piece of shoes, the package and stability have been improved greatly.

KH-202

Material: Wear resistance, super fiber fabrics + Nature rubber

Color: Blue/silver Size: 35-45#

Molding: Narrow molding

Functions:

Microfiber Anti torsion ESS Eva Double air Mesh

Hyper sole TPU Fit

★The using of TPU FIT technology on the side of the shoes is not only can prevent the damage, but also improve the extensibility of the shoes and provide more protection to feet.

★At the heel piece side of the shoes, TUP is one of the important parts in the CBS system which is used to prevent deformation during strenuous exercise.

★Double air-mesh can improve the ventilating and air permeability of the shoes. The colorful TUP plating can prevent the deformation, enhance wear fitness and keep the shape of shoes.

KH-210

Material: Wear resistance, super fiber fabrics + Nature rubber

Color: Red(a); White(b) Size: 35-45#

Molding: Wide molding

Functions:

Microfiber Anti torsion ESS Eva C.B.S

Hyper sole 3E wide last TPU Fit Double air Mesh

★3D ventilated mesh design can accelerate air flow and perspire.

★The stability support which is provided by ESS is the foundation of badminton shoes.

★TPU supporting sheets is one of the most important parts of CBS system. It can avoid and modulate the deformation of upper.

★Kumpoo adopts a lot of Hyper sole in the front part of the insole to ensure the perfect shock absorption. Hyper sole and 12mm shock absorbers which are used in the front and heel of shoes will make the shoes more stable and shock absorbers.

KH-188

Material: Wear resistance, super fiber fabrics + Nature rubber

Color: White/Silver/Red Size: 35-45#

Molding: Wide molding

Functions:

Microfiber Anti torsion ESS Eva Double air Mesh

Hyper sole 3E wide last TPU Fit C.B.S

★By applying 3D ventilated mesh in the upper, it can accelerate the air flow and perspire.

★By using of high density PU in the shoes belt holes, it can reduce the deformation of shoes belt holes.

★The high density TPU in the sole can avoid the deformation and protect ankle.

★High elastic Hyper sole with thicknesses as much as 12mm in the heel of shoes has the features of good stability, rebound and shock absorbers.

KH-162

Material: Wear resistance, super fiber fabrics + Nature rubber
Color: White/Red(a); White/Purple(b); White/Blue(c)
Molding: Wide molding Size: 35-45#

Functions:

Microfiber Anti torsion ESS Eva Hyper sole
3E wide last TPU Fit

(b)

(c)

★The sandwich mesh design enhances the ventilation of shoes greatly.

★The foot arch structure which is formed by 3K woven carbon pieces and EVA can prevent the shoe from deforming and protect the feet better during the movement.

★The new rubber stereo particle sole will increase the control force and anti-skidding as well as reduce the weight of shoes.

KH-130

NEW

Upper: Super fiber fabrics+High density PU + Sandwich mesh+Laser craft
Sole: Raw rubber+MD+TPU+Carbon pieces
Color: Gold/Black Size: 35-45#
Molding: Wide molding

Functions:

Microfiber Anti torsion ESS Eva Double air Mesh
Hyper sole 3E wide last

KH-130

Laser cutting craft will enhance the ventilation greatly.

Be cool

The foot arch structure which is formed by 3K woven carbon pieces and EVA can prevent the shoes from deforming.

The KPU mesh in the toe can increase the wear-resistance and extend the shoes' life.

Kumpoo

2014 Summer Shoes Series

SHOES

Kumpoo professional women shoes are coming. The light and elegant design can perfectly show the beauty and confidence of women. The fashionable design and comfortable foot sense will inspire unlimited energy.

★By applying special double air mesh in uppers, it accelerates the ventilation greatly. The PU design in the air-mesh makes the shoes more fashionable.

★The nature rubber and special material in the sole can increase its wear resistance and anti-skidding.

★The stability support which is provided by ESS is the foundation of badminton shoes.

KH-61 (Women)

Material: Wear resistance, super fiber fabrics + Nature rubber
Color: Gray/purple Size: 35-40#
Molding: Wide molding

Functions:

Microfiber Anti torsion ESS Eva Double air Mesh
Hyper sole 3E wide last TPU Fit

★PU design in the uppers makes the shoes quite fashionable.

★The colored TPU plating makes the shoes quite bright and fashionable.

★The anti-skidding system in the outer side of sole can avoid spraining.

★High elastic Hyper sole with thicknesses as much as 12mm in the heel of shoes has the features of good stability, rebound and shock absorbers.

KH-42

Material: Wear resistance, super fiber fabrics + Nature rubber
Color: White/Blue (39-45#)(a); White/Pink (35-40#)(b)
Molding: Wide molding Size: 35-45#

Functions:

Microfiber Anti torsion ESS Eva Double air Mesh
Hyper sole 3E wide last TPU Fit

(b)

★Laser decorative sheet design is quite fine and novel. The penetration effect will enhance the ventilation greatly.

★By applying plating technology in uppers, the shoes look quite bright.

★The anti-skidding system in the outer side of sole can avoid spraining.

★High elastic Hyper sole with thicknesses as much as 12mm in the heel of shoes has the features of good stability, rebound and shock absorbers.

KH-53

Material: Wear resistance, super fiber fabrics + Nature rubber
Color: White/Red/Gray Size: 35-45#
Molding: Wide molding

Functions:

Microfiber Anti torsion ESS Eva Double air Mesh
Hyper sole 3E wide last TPU Fit

★The penetration technology will enhance the ventilation greatly.

★Applying three-dimensional space design in the inner side of sole and covering part of the uppers with nature rubber. It will increase the wear resistance of shoes greatly.

★By designing the sole grain after the sole of gecko, it can enhance court biting function.

★The wave sheet in the heelpiece is quite lively. The high strength material can protect the ankle better.

KH-33

Material: Wear resistance, super fiber fabrics + Nature rubber
Color: White/Black Size: 35-45#
Molding: Wide molding

Functions:

Microfiber Anti torsion ESS Eva Double air Mesh
Hyper sole 3E wide last

(a)

★The KPU fusing technology and sandwich mesh can enhance the ventilation of shoes greatly.

★V design can provide excellent support for shoes and increase the beauty.

★The nature rubber and stereo particle design has the features of high wear-resistance and skid resistance.

KH-37

NEW

Molding: Wide molding

Functions:

Microfiber Anti torsion ESS Eva Double air Mesh
Hypersole 3E wide last

PERFECT

Parent-child Shoes

- ★Applying three-dimensional space design in the inner side of sole and covering part of the uppers with nature rubber. It will increase the wear resistance of shoes greatly.
- ★The special air-mesh in uppers enhances the ventilation greatly.
- ★The nature rubber and special material in the sole can increase its wear resistance and anti-skidding.
- ★The stability support which is provided by ESS is the foundation of badminton shoes.

KH-21

Material: Wear resistance, super fiber fabrics + Nature rubber
Color: White/Red
Molding: Wide molding

Size: 28-45#

Functions:

Microfiber Anti torsion ESS Eva Double air Mesh
Hyper sole 3E wide last

- ★The hole design of toe can enhance the ventilation and keep your feet dry during the movement.
- ★The sandwich design can accelerate air flow greatly as well as keep your feet dry and comfortable during the movement.
- ★The stability support which is provided by ESS is the foundation of badminton shoes.
- ★The nature rubber and stereo particle design have the features of high wear-resistance and skid resistance.

KH-21A Upgraded version

NEW

Upper: Super fiber fabrics+High density PU + Sandwich mesh
Sole: Raw rubber+MD+EVA(ESS)
Color: Blue/Green
Molding: Wide molding

Size: 35-45#

Functions:

Microfiber Anti torsion ESS Eva Double air Mesh
Hyper sole 3E wide last

★The PU design and sandwich mesh can enhance the ventilation of shoes greatly and keep your feet dry.

★TPU sole can prevent the shoe from deforming and protect the feet better during the movement.

★The nature rubber and stereo particle design has the features of high wear-resistance and skid resistance.

KH-19

NEW

Upper: Super fiber fabrics+High density PU + Sandwich mesh

Sole: Raw rubber+MD+TPU

Color: Yellow/purple(a); White/red(b)

Molding: Middle molding Size: 35-45#

Functions:

Microfiber Anti torsion ESS Eva Double air Mesh Hyper sole

★The front part of the sole is 3MM wider than normal ones. This kind of design can offer enough space for toes, ease the fatigue and keep long-time comfortable.

★The shock resistance material (HYPER SOLE) in the heelplace and sole has excellent performance in anti-shock and rebound.

★Kumpoo FLEXIBLE has great effect in cushion, anti-shock and rebound.

★By applying three-dimensional space weave super fiber fabrics, the force among molecules has increased 8% and the wear resistance has increased 8%.

KH-18

Material: Wear resistance, super fiber fabrics + Nature rubber

Color: White/Red

Size: 35-45#

Molding: Wide molding

Functions:

Microfiber Anti torsion ESS Eva Double air Mesh Hyper sole 3E wide last

FUNCTIONS

Microfiber High rub resistance, light and soft artificial leather, improving substantially the durability and comfort level.

Anti torsion Guaranteeing midsole stability, preventing over deflecting from extreme sports.

ESS Eva Light and high strength. It can enhance the stability of sole during the movement.

Super light Kumpoo has developed a super light rubber and insole which can make the shoes light as well as reaching the rigorous test requirement. It can increase the wear resistance and grip of the shoes.

C.B.S The latest CBS system makes the lightest professional badminton shoes.

Hyper sole Hyper sole and 12mm shock absorbers which are used in the front and heel of shoes will make the shoes more stable and shock absorbers.

Tpu fit Kumpoo TPU FIT technology can avoid the damage of shoes, provide certain ductility during the movement and maintain the package to feet.

Double air mesh Double air-mesh improves the ventilation and air permeability.

3E wide last Kumpoo developed a special shoes last for Chinese market. Comparing to other brands' 2.5 last, it is more suitable for the East Asia people and provides a more comfortable fit.

Lateral wall Kumpoo's unique molding and patent sole design can prevent the feet spraining.

Metallic pu A kind of special artificial leather which has superior softness, beautiful metal color appearance and excellent comfortable sense.

Air hole The six air holes of the sole will increase the ventilation and perspire as well as keep the feet dry and comfortable.
